

AuriMate(Smart Money Management App)

Platform Used: Figma

Purpose of the memo

This memo explains the reasons for selecting Figma as the primary platform for designing the AuriMate mobile app.

Justification

Interactive Prototype:

Figma allows designers to create high-fidelity prototypes with interactive flows, animations and transitions. This feature makes it ideal for testing the Aurimate app's usability.

Auto save:

The auto save tool ensures design integrity and safety by automatically saving in real time, so even if the browser crashes or anyone forget to save manually.

Smart components:

For designers who need to quickly create and update projects, Figma components are quite helpful. Users may quickly apply changes to all related pages and easily duplicate their work by creating components. This saves time.

Browser based platform:

Because Figma is browser-based, designers can use it on any computer with an installed internet browser. don't require any installation or downloads.

Collaborative environment:

Figma allows real time collaboration so multiple contributors can work together in one place. This helps maintain consistency.
